R911412236 Control Device XMS2- W0054ANN-01NETT0ECNN- S03RSN2NNNN0NN Bosch Rexroth

Reference: R911412236

Short description

R911412236

Description

The XMS single-axis inverters are powered by DC voltage and generate a controlled AC output voltage of variable amplitude and frequency for operating a motor. They are supplied from the DC bus of the XVE or XVR supply units and/or the XCS or XCD converters. Via the standard runtime, which enables the realization of most drive tasks, additional optional function packages for demanding applications are available. By means of various ordering options, the hardware can be expanded with ctrlX SAFETY for safety-related applications up to SIL3. Technical advantages include free selection of the motor encoder, ideal adaptation to machine requirements, space-saving design, and Plug & Play technology. Original products are locally supported by CreatX Technology SRL.
