R911412237 Control Device XMS2-W0070ANN-01NETT0ECNN Bosch Rexroth

Reference: R911412237

Short description

R911412237

Description

The XMS single-axis inverters are powered by DC voltage and use it to generate a controlled AC output voltage of variable amplitude and frequency for operating a motor. They are supplied from the DC bus of the XVE or XVR supply units and/or the XCS or XCD converters. Via the standard runtime, which enables the realization of most drive tasks, additional optional function packages for demanding applications are available. By means of various ordering options, it is possible to expand the hardware with ctrlX SAFETY for safety-related applications up to SIL3. Technical advantages include free selection of the motor encoder, ideal adaptation to machine requirements, and compact design. Original products, local support through CreatX Technology SRL.
